

SOCIAL ELITE MARKETING GROUP

AI Operator Proposal for New Hope Weight Loss

A dedicated AI system built specifically for your weight loss practice — automating patient follow-up, lead management, scheduling, and day-to-day operations so your team can focus on patient care.

COMPLETE SETUP

\$5,000

One-Time • Hardware
Included

New Hope Weight Loss deserves more than generic software — you need an AI operator that understands the weight loss and wellness space. This proposal outlines a fully installed, always-on AI system that runs 24/7 on dedicated hardware in your practice, handling the repetitive work that pulls your team away from patients.

Prepared For: New Hope Weight Loss

Prepared By: Jeremy Garcia

Company: Social Elite Marketing Group

Date: May 3, 2026

BUILT FOR WEIGHT LOSS & WELLNESS

Core Capabilities

Automated lead follow-up & patient nurture sequences

Appointment scheduling & confirmation reminders

Patient inquiry response — 24/7, instant

Marketing content creation & social media drafts

Review generation & reputation monitoring

Insurance & program eligibility pre-screening

Competitor & market research on demand

Internal reporting & performance dashboards

The Problem We Solve

WHY THIS MATTERS FOR YOUR PRACTICE

Weight loss clinics live and die on lead follow-up speed. When a potential patient fills out a form at 9 PM or sends a message on the weekend, every hour without a response is a patient lost to a competitor. Your team shouldn't have to choose between patient care and admin work — and with an AI operator, they won't have to.

How It Works for Your Practice

REAL-WORLD USE CASES

Instant Lead Response

New inquiry comes in from your website, Meta ads, or Google — the AI responds within seconds, qualifies the lead, and books the consultation. No more lost leads sitting in a queue.

Patient Follow-Up

Automated check-ins after consultations. Nurture sequences for patients who haven't booked. Re-engagement campaigns for inactive patients — all personalized, never robotic.

Scheduling Automation

Handle appointment requests, send confirmations and reminders, reduce no-shows. Integrates with your existing scheduling system.

Ad Performance Monitoring

Your AI monitors your Meta ad campaigns daily — tracking cost per lead, conversion rates, and flagging anything that needs attention before budget is wasted.

Review & Reputation

Automatically request reviews from satisfied patients. Monitor Google and Yelp for new reviews. Alert your team to any negative feedback immediately.

Content & Social Media

Draft social posts, blog articles, patient education content, and email newsletters — all tailored to weight loss and wellness topics relevant to your audience.

What's Included

EVERYTHING IN THE \$5,000 SETUP

Dedicated Mac Mini hardware

Your AI runs on its own machine — no shared servers, no cloud dependency. It's yours, in your office, always on.

Full OpenClaw AI platform installation

Complete setup and configuration of the AI operator environment, optimized for healthcare and weight loss operations.

Premium AI brain (Claude Opus)

Powered by the most advanced reasoning model available — not a basic chatbot. Understands context, nuance, and your business.

**Secondary AI for background tasks**

A separate, cost-efficient AI model handles routine jobs like scheduling checks and monitoring — keeping costs low while the premium brain handles patient-facing work.

**Weight loss & wellness skill library**

Pre-built capabilities tailored to your industry — lead qualification, patient communication templates, health content generation, and more.

**Memory & learning system**

Your AI remembers patient interaction history, your preferences, team protocols, and business rules. It gets smarter over time.

**Security & system monitoring**

Built-in health checks, file integrity protection, and security alerts. Patient data stays on your hardware — not in the cloud.

**Messaging integration**

Connect your AI to Telegram, SMS, or other channels so you can communicate with it from anywhere — check on leads, get reports, give instructions from your phone.

**Initial automation setup**

We don't just install it and leave — we configure your first set of automated workflows: lead follow-up, appointment reminders, and daily reporting.

**Full testing & verification**

Every component is tested and confirmed working before handoff. You get a working system, not a project in progress.

What's Not Included

OUTSIDE THE
INITIAL SETUP

**Ongoing AI subscription costs**

The AI models require monthly subscriptions (typically \$20–\$200/mo depending on usage). We'll set up the most cost-effective plan for your needs.

Included Support

FREE FOR 30
DAYS

**If anything breaks or stops working**

Full troubleshooting and repair covered during the support window.

**Bug fixes & configuration adjustments**

Custom integrations beyond initial setup

EHR/EMR connections, payment systems, or specialized third-party tools can be scoped as add-on projects.

Advanced custom automations

Complex multi-step workflows beyond the initial set are available as future project work.

Ongoing development & expansion

Continuous growth of your AI's abilities beyond the base build — available on retainer or per-project.

Covered for 30 days after installation.

Setup guidance & training

We walk your team through how to interact with and get the most out of your AI operator.

What support does not cover

New features, new automations, or development work beyond what was delivered.

Simple rule: if something we built stops working, we fix it. If you want to build something new, we scope it separately.

Investment Breakdown

ONE-TIME SETUP

Dedicated Mac Mini Hardware

Your own always-on machine — included in the price, not a separate purchase.

Full AI Platform Installation

OpenClaw environment, AI models, memory system, security monitoring.

Healthcare & Weight Loss Configuration

Industry-specific skills, compliance-aware workflows, patient communication templates.

Initial Automations & Training

Lead follow-up, scheduling, reporting workflows + team training session.

Total Investment (One-Time)

\$5,000

No hidden fees. Hardware, installation, configuration, initial automations, training, and 30 days of support — all included. Ongoing AI model subscriptions are the only recurring cost (we help you set up the most cost-effective plan).

After Setup — Growth Options

WHEN YOU'RE READY TO EXPAND

Option A — Monthly Retainer

Ongoing support, maintenance, and 1–2 new automations or workflow builds per month. Your AI keeps evolving with your practice. **Starting at \$500/mo.**

Option B — Per-Project Basis

Need a specific integration or workflow? We scope it individually and quote it. No commitment — just results. **Priced per project.**

The base installation gives you a powerful foundation. The next layer is deciding which parts of your practice you want the AI to own first — and we'll help you prioritize based on what moves the needle fastest.
